

Federal Contracting Blueprint

A Strategic Guide to Winning Data Entry, Analytics, and Reporting Contracts via SAM.gov

1. Primary Industry Target Identifiers

To win data-focused federal contracts, your SAM.gov profile must match the classification codes used by procurement officers. Update your 'All Awards' registration with the following North American Industry Classification System (NAICS) and Product Service Codes (PSC):

Code	Classification Type & Scope
NAICS 541519	Other Computer Related Services (Primary for general data analytics & systems support)
NAICS 518210	Computing Infrastructure, Data Processing, and Hosting Services (High-volume database cleaning)
NAICS 541611	Administrative & General Management Consulting (Business intelligence & executive dashboards)
NAICS 561410	Document Preparation Services (Manual data entry, typing, and transcription projects)
NAICS 541910	Marketing Research & Public Opinion Polling (Statistical analysis and metrics reporting)
PSC DF01	IT and Telecom - IT Management Support Services (Labor-based analytical roles)
PSC R612	Support - Administrative: Information Retrieval
PSC R702	Support - Management: Data Collection

2. Configuring Your SAM.gov Advanced Search Engine

Do not rely on basic keyword string matching. Use the Advanced Search tool in the Contract Opportunities domain to filter down to actionable, high-probability leads:

- **Set Code Filters:** Input your target NAICS and PSC codes to screen out unrelated service solicitations.
- **Refine Keyword Strings:** Use explicit phrase grouping with quotes and boolean operators in the search field, for example: "data visualization" OR "Power BI" OR "Tableau" or "data entry" OR "database management".
- **Target Early Phase Notices:** Filter your search specifically by *Sources Sought* and *Presolicitation* notice types. Responding to these allows you to influence technical specifications before a final request for proposal (RFP) drops.
- **Automate Tracking:** Click 'Save Search' on your workspace dashboard to turn your criteria into automated daily email notifications.

3. Market Intelligence & DataBank Analysis

Maximize your bid ROI by auditing historical spending data through the SAM.gov DataBank and USAspending.gov:

- **Identify High-Volume Buyers:** Run historic procurement reports on NAICS 518210 and 541519. Agencies like the Department of Veterans Affairs (VA), Health and Human Services (HHS), and Social Security Administration (SSA) consistently post the highest volume of recurring administrative data workloads.

- **Analyze Competitor Pricing:** Audit historical awards to see which large primes or small businesses previously won target contracts, including their total award pricing and baseline labor rates.
- **Leverage Subcontracting:** Locate past winners to pitch your data capabilities as a specialized subcontractor, bypassing the need for extensive prime past performance.

4. Constructing a Tailored Capability Statement

A Capability Statement is your business resume. When marketing to Agency Small Business Liaisons, ensure your one-page document highlights these sector-specific data criteria:

- **Technical Stack & Infrastructure:** Explicitly list your tools (e.g., Python, SQL, R, Excel, Power BI, Tableau, AWS, Azure).
- **Data Security & Compliance:** Highlight infrastructure protocols including HIPAA compliance, FedRAMP authorization, and your staff's clearance availability (e.g., Public Trust, Secret).
- **Data Accuracy Differentiators:** Define your quality control processes, such as dual-pass verification or automated error-checking script runtimes that guarantee strict data integrity.
